

Interactive Web reports, 11/13

Smart Imaging Technologies' Interactive Web Reports for its Simagis Live Digital Pathology servers make it possible for pathologists to complete and sign off digital cases, create professional, media-rich reports from digital slides, and share them instantly with clients, colleagues, or patients.

Interactive Web Reports include live links to digital slides and provide a number of secure sharing options. Customizable templates and flexible data fields can match specific work processes, and case data can be synchronized with laboratory information systems via an application programming interface for seamless integration between digital and physical diagnostic processes. Interactive Web Reports can be viewed from mobile devices.
