

Leica Biosystems digital pathology scanner

April 2020—Leica Biosystems launched the Aperio GT 450, its next-generation digital pathology scanner. The research-use-only Aperio GT 450 offers continuous rack loading with priority scanning and takes 32 seconds to scan a 15 mm × 15 mm tissue area on a pathology slide at 40× magnification with a throughput of 81 slides per hour. The system's slide racks are compatible with other Leica Biosystems products.

The scanner's scalable IT platform, Scanner Admin Manager, allows multiple scanners to be securely connected to a central monitoring hub, removing individual workstation needs for each scanner.
