

## Leica joins GHX Exchange, 6/14

June 2014—Leica Biosystems joined the GHX electronic trading exchange for U.S. customers. The GHX Exchange enables provider organizations to send their electronic data interchange (EDI) transactions through a single connection as opposed to multiple point-to-point EDI connections, thus allowing Leica's customers to view their transactions and address discrepancies in real time. In addition, Leica implemented GHX eInvoicing, which delivers electronic invoices to its customers without EDI capabilities. These customers will receive PDF-file invoices via an online portal, reducing administrative time and creating greater visibility of shipment status and payment information.
