

## Leukemia fusion genes screening kit, 10/15

**QuanDx announced that its Leukemia Fusion Genes (Q30)** Screening Kit has been released as a CE IVD product. The Leukemia Fusion Genes (Q30) product is a qualitative in vitro diagnostic kit for use in a clinical laboratory for the simultaneous detection of 30 fusion genes using a novel multiplex reverse transcription real-time PCR system. The product, according to the company, provides a sensitive, specific, reliable, and cost-effective tool that is easy to perform for the routine screening of leukemia fusion transcripts.
