

Liquid BNP control, 5/13:87

Randox Laboratories' Acusera liquid BNP control is for use in the routine monitoring of accuracy and precision. Assayed instrument-specific target values and ranges are provided for Beckman Access, Abbott Architect, and Siemens Advia Centaur instruments.

The BNP control is a 100 percent human serum, manufactured to the high-quality standards associated with all Acusera controls. It comes in a liquid ready-to-use format in 1-mL vials, which makes it ideal for point-of-care testing, and has 30-day open-vial stability.
