

## Liquid chemistry linearity test set, 4/13:88

Quality Laboratory Solutions has added to its LinChek product line of calibration verification/linearity material a chemistry linearity test set. The new test set is a liquid product packaged as six distinct levels with three ampules of 1 mL for each level.

Twenty-five different analytes, including the most-requested tests, are included. An 18-month supply of product is available with each test set by providing three separate sets of linearity material.
