

Molecular biology workflow solution, 2/14

February 2014—BioMérieux is moving forward with its comprehensive automation solution for reference or centralized molecular biology laboratories and has selected Life Technologies' 7500 instruments as its preferred thermocyclers.

BioMérieux's comprehensive automation solution will consist of three modules from samples to results, including BioMérieux's NucliSENS easyMAG sample purification platform; BioMérieux's easyStream liquid-handling system for PCR setup, which is being prepared for launch; and Life Technologies' Applied Biosystems real-time PCR instruments. BioMérieux's NucliSENtral middleware will connect the platforms.

ized testing flows by batches, adding standardization and traceability to improve the quality of results. Its modularity will make it possible for labs to add new modules according to their needs. The high level of flexibility of this comprehensive automation solution will allow labs to use it with their own laboratory-developed kits and perform á la carte multiplexing panels.
