

## Mopec, Milestone sign agreement, 6/16

**June 2016—Mopec has signed an exclusive agreement to feature Milestone's MacroPath** pro-x macro digital imaging system with its MB800 grossing station.

Milestone's pro-x camera system can be imbedded optionally in the Mopec MB800 grossing station's camera imaging canopy, keeping the pathology camera precisely and securely in place for data recording, transferring, and syncing. Milestone's 16 megapixel digital camera, featuring autofocus, auto-light adjusting, and 10× optical magnification, aims to enable detailed specimen observation and image capturing. Milestone's gross imaging software will generate a library of sequential, individually labeled specimen images, creating full specimen documentation and detailed pathology reports.

The MB800 grossing station features an interactive touchscreen display that highlights essential operational information and monitors formalin level, bio waste level, filter usage duration, and ventilation performance. Designed to accommodate operators of varying heights, the MB800 has an elevation feature that raises or lowers the unit by 12 inches with a simple hand control. Motion sensors preserve energy and resources when the system is not in operation.
