

mTuitive, Gestalt partner to enhance pathology reporting

Oct. 11, 2022—[mTuitive](#) and [Gestalt Diagnostics](#) announced a partnership to enhance reporting for pathology laboratories. The companies will develop an interface that will create a seamless workflow using key data captured in mTuitive's and Gestalt's solutions.

"By combining the two solutions, mTuitive and Gestalt are able to improve the comprehensiveness of the information being recorded, the ease of gathering it, and the power of distributing it to other physicians as well as for multiple downstream uses," Lisa-Jean Clifford, Gestalt chief operating officer and chief strategy officer, said in a company press release.

Gestalt's PathFlow solution is a cloud-based, customizable digital pathology enterprise platform consisting of professional, education, and research modules. mTuitive's CAP eFRM captures diagnostic data contained in the CAP Cancer Protocols (via use of the CAP electronic Cancer Checklists) and ensures that laboratories remain in compliance with content updates and documentation requirements.
