

## Multiplexed DNA analysis, 4/14

April 2014—AutoGenomics launched the Infinity High Throughput System, which provides semiautomated multiplexed DNA analysis in an open front-end system with a flexible and scalable throughput, from 96 to 3,456 samples tested in just one shift. The system is meant to meet the needs of high-volume clinical laboratories and is compatible with the existing menu of more than 50 Infinity applications.
