

## Mycobacteria library, 8/15

**Bruker has announced what it says is a major expansion of its Mycobacteria Library** for research use only on the MALDI Biotyper microbial mass spectrometry system. The Mycobacteria Library 3.0 includes 149 different species for comprehensive species coverage, enabling significantly improved rapid and accurate identification of almost all described mycobacteria species. Intraspecies diversity is covered by hundreds of analyzed strains. Twenty-four laboratories from nine countries provided well-characterized clinical mycobacteria strains, completing an already comprehensive set of isolates from strain collections.
