

[NeuMoDx, Sentinel partnership](#)

written by CAP TODAY

February 19, 2020

February 2020—NeuMoDx Molecular and Sentinel Diagnostics announced a partnership to develop diagnostic assays for the NeuMoDx 96 and 288 molecular systems. Sentinel’s real-time PCR assays will be adapted to the NeuMoDx 96 and 288 molecular systems and will incorporate Sentinel’s STAT-NAT technology, which provides the ability to stabilize the activity of a PCR mix, allowing room-temperature storage and transport. The test menu pipeline for the systems will include assays to detect and monitor post-transplant infections, parasitic and hospital-acquired infections, and respiratory infections, and for pharmacogenetics applications.
