

# [NovoPath adds capabilities to NovoPath 360](#)

written by CAP TODAY

October 3, 2022

Oct. 3, 2022—[NovoPath](#) today announced the release of enhanced integrated workflows to its software-as-a-service-based LIS platform, NovoPath 360. Users can now add molecular and genomic ancillary tests to anatomic workflows from a single case, producing one report for all tests, the company said in a press release. Additional enhancements include the ability to create a single accession for a specimen, perform tests from a single case, and combine test results automatically; restrict and allow access to the LIS based on a user's authorization level; and add, edit, rename, reorder, and delete fields within the application to reflect a laboratory's specific workflow.
