OGT releases SureSeq NGS library prep kit

June 19, 2019– test123 [Oxford Gene Technology](#) has expanded its SureSeq portfolio with the SureSeq NGS Library Preparation Kit, a library preparation solution for hybridization-based target capture in next-generation sequencing. The kit includes a ready-to-use hybridization and wash buffer. OGT has also developed a library preparation automation workflow available for the Agilent Bravo NGS (Option A) instrument that aims to further reduce manual handling and save time.

"As well as refining the workflow with fewer handling steps, fragmentation and concentration steps can, if desired, now be performed without capital equipment expenditure, while still delivering libraries of the highest quality," according to the company.

OGT's SureSeq NGS portfolio includes targeted panels, library preparation kits, and a software package.
