PerkinElmer launches BioQule NGS system

written by CAP TODAY

July 19, 2022

July 2022—PerkinElmer has launched its research use only BioQule NGS system, an automated benchtop solution for next-generation sequencing library preparation of up to eight samples. The system requires as little as 10 ng of starting material per run to create libraries. By incorporating automated thermocycling, integrated quality control through optical quantification, and robust liquid-handling technology in a single device, the company says the system enables researchers to produce high-quality NGS libraries that yield reliable, reproducible results.

[Illumina introduces pan-cancer CDx](#)

written by CAP TODAY

July 19, 2022

July 2022—Illumina announced that a companion diagnostic indication has been added to its CE-marked in vitro diagnostic TruSight Oncology Comprehensive (EU) test. The CDx pan-cancer indication will allow identification of cancer patients with solid tumors who are positive for neurotrophic tyrosine receptor kinase gene fusions including NTRK1, NTRK2, or NTRK3 and who may benefit from targeted therapy with Bayer's Vitrakvi (larotrectinib), a genomically matched treatment.
