

[A single pathway for HIV testing and therapy](#)

written by CAP TODAY

June 16, 2022

June 2022—By revealing the value of a diagnostic algorithm using quantitative RNA as the second test to confirm reactive HIV screening results, Daniel Gromer, MD, and colleagues say their simulation modeling suggests clinical improvement over the standard-of-care algorithm, and at lower cost if HIV specimen positivity is high.

Lining up for low titer O whole blood in trauma care

written by CAP TODAY
June 16, 2022

June 2022—For many blood suppliers, there is more enthusiasm for low titer O whole blood than there is an ability to make it, especially with the pandemic having made it harder than ever to collect.

[Compass on ‘consumerizing health care’ and more](#)

written by CAP TODAY
June 16, 2022

June 2022—What stood out among all that was seen and heard at the Executive War College? Compass Group members who were there answer CAP TODAY publisher Bob McGonnagle’s question in their early May virtual get-together, shortly after the War College took place. Here’s what they and other lab leaders said about retail lab testing, digital pathology and artificial intelligence, and their plans for the future.

[From the President's Desk](#)

written by CAP TODAY

June 16, 2022

June 2022—You're probably familiar with the expression "jack of all trades, master of none." While that sounds disparaging, it's actually taken out of context. The original quote in its entirety is, "A jack of all trades is a master of none, but oftentimes better than a master of one." It was intended as a compliment for someone who had good, broad knowledge. The widespread misinterpretation of that quote supports a common idea that no individual can be really good at a lot of different things. But pathologists challenge that concept every day. While many of us subspecialize, we are able to fall back on our broad training when circumstances require it. Such may be the case when encountering pathologic findings that indicate a disorder not commonly found in our area of expertise, or findings that indicate a systemic illness. Many of us find that we have to be experts on different things on different days and in different parts of our career.
