

Paper on IHC and prostate pathology, 5/14

May 2014—Dako released a paper titled “Immunohistochemistry in Prostate Pathology” that illustrates the significant impact immunohistochemistry can have on diagnostic prostate pathology. The paper is coauthored by Glen Kristiansen, MD, professor at the Institute of Pathology, University Hospital of Bonn, Germany, and Jonathan I. Epstein, MD, professor at the departments of pathology, urology, and oncology at the Johns Hopkins Hospital Medical Institutions.

The paper, which is intended to be a helpful companion for pathologists in their daily work, is a reference on the various prostate markers and their limitations.
