

Patent for microarray printing , 4/17

April 2017—Aushon BioSystems announced U.S. Patent No. 9,527,085, titled “Apparatus and method for dispensing fluid, semi-solid and solid samples,” was issued by the U.S. Patent and Trademark Office for microarray printing of complex biological and chemical fluids. The invention enables Aushon to fabricate microarrays in a wide variety of formats and densities, including its proprietary circular array format used in its Ciraplex kits and is available as part of its 2470 microarrayer.
