Pathology Visions 2023

"Igniting Digital Pathology Transformation"—the theme for [Pathology Visions 2023](#). The Digital Pathology Association (DPA) invites you to attend this year's annual meeting taking place October 29–31 in Orlando, Fla.

Pathology Visions brings together hundreds of pioneers and peers across the field of digital pathology to address real-world, practical applications of digital pathology and AI today, as well as the future. Attendees have access to more than 50 expert presenters, over 70 poster presentations, nearly 50 vendors showcasing the latest innovations, countless opportunities for discussion and engagement, and much more. If you are a clinician, scientist, technician, or trainee #PathVisions23 is the place for you.

"I am excited to see digital pathology fully launch and get implemented into mainstream practice. Digital pathology is for everyone because it encompasses so many things and can be successfully applied to clinical and nonclinical applications. Excitement in this field persists because there is always innovation and new creative applications. I am particularly motivated to attend the upcoming Pathology Visions meeting this year where I will get the opportunity to team up with all of you. I look forward to seeing all those worthwhile devices, emerging products, and sharing our success stories and contemporary ideas. Together we can continue to ignite this field and make a difference." *—Dr. Liron Pantanowitz, DPA president, and chair, Department of Pathology, UPMC.*
