

PerkinElmer, Covaris partnership, 8/15

PerkinElmer's Chemagic research instrumentation and kits are now available with the Covaris TruXtrac FFPE DNA MicroTube Kit for Chemagen Technology for DNA/RNA purification powered by Adaptive Focused Acoustics technology. The kit rapidly removes paraffin and rehydrates formalin-fixed, paraffin-embedded tissues in an aqueous buffer. This preparation is optimized to work with PerkinElmer's automated magnetic bead-based DNA/RNA separation technology for low-, medium-, and high-throughput solutions.

Molecular research professionals can leverage these solutions to significantly increase the quality and yield of their nucleic acids from FFPE samples in less than four hours for up to 96 samples. They can also simplify their workflows for a wide range of NGS, genetics, and biobanking applications.

PerkinElmer's Chemagic kits are available for use with its Chemagen Technology platform.
