

Philips WSI systems in Austria labs, 11/17

November 2017—Royal Philips announced that two pathology laboratories in Austria have made the transition to a fully digital workflow. The Pathology Institute in Hall and the Pathology Institute at Tirol Kliniken Innsbruck have fully digitized their diagnostic process with Philips IntelliSite Pathology Solution, a whole slide imaging system for primary diagnosis.

Other laboratories that have digitized their workflow are LabPON in Hengelo, the Netherlands, Hospital Campus de la Salud, in Granada, Spain, and AZ Sint-Jan, Bruges, Belgium.

Philips received FDA clearance in April to market Philips IntelliSite Pathology Solution for primary diagnostic use in the United States.
