

Pneumatic tube station, 9/15

At the AACC show 2015

Swisslog Healthcare Solutions announced the launch of its Nexus Station. As the next generation of pneumatic tube stations, the Nexus Station provides quiet delivery of PTS carriers and improved carrier management through a carousel that handles both send and receive actions. Other features and benefits are reduced spill risk, easy-to-clean surface, and queueing functionality to accommodate users' needs first by decoupling system operation from workflow. Locally stored, secure payloads offer ready access on demand, simplifying secure retrieval and allowing more time at the bedside. Repurposing existing infrastructure allows station replacement with minimal disruption and downtime.

The Nexus Station is part of a broader Nexus Technology Solutions Platform that provides connection and integration across pneumatic tube system hardware, software, and accessories.
