

Pneumococcal array, 10/14

October 2014—Quansys Biosciences is releasing Q-Plex Pneumococcal Array (14-plex) for the evaluation and detection of IgG antibody concentrations to pneumococcal polysaccharide serotypes 1, 3, 4, 6B, 7F, 8, 9N, 9V, 12F, 14, a8C, 19A, 19F, and 23F. With 14 unique serotypes represented by individual spots in the bottom of a 96-well plate, along with both CPS positive and negative controls, users can have more than 1,120 unique data points to analyze in as little as 90 minutes.
