

POC immunoassay testing system

June 2018—Sekisui Diagnostics has partnered with Qualigen to distribute the FastPack IP System, Qualigen's POC immunoassay testing system. Based on chemiluminescent technology, the FastPack IP System provides immunoassay results in 12 minutes or less for vitamin D, testosterone, TSH, FT4, total and free PSA, and hCG. It was designed for the physician office and uses reagent packs in a CLIA moderate complexity setting.

In addition to immunoassay tests performed on the FastPack IP System, Sekisui Diagnostics provides a range of OSOM rapid tests for trichomonas and bacterial vaginosis to aid in the diagnosis of vaginal infections as well as tests for pregnancy, ulcer-causing *Helicobacter pylori*, mononucleosis, influenza, and streptococcus A.
