

Pressure-activated safety heel stick for infants, 6/14

June 2014—PlatinumCode added pediatric pressure-activated safety heel stick devices to its lineup. The devices come in four sizes and colors, with a range of blade depths. The heel stick design is patented, FDA approved, and ISO 9001, 14001, and 13485 certified, and the blades deactivate after use, eliminating the risk of cross-contamination. Each heel stick device is blister-packed and sterilized.
