

Primera unveils Signature EVO slide and cassette printers

October 2023—Primera Technology has launched its next-generation Signature EVO slide printer and Signature EVO cassette printer.

Integrated PTLab software allows users to print text, graphics, logos, and linear or 2D barcodes directly onto slides and cassettes. Both printers offer black and color printing and feature a backlit LED screen and Ethernet connectivity. The slide printer stores 100 slides and prints up to 10 slides per minute. Its SlideSeparator technology uses a puff of highly compressed air to separate slides. This mechanism, the company says, protects slides from environmental factors such as static electricity and humidity, which can cause slides to adhere to one another and result in misfeeds or broken slides. The cassette printer holds 40 cassettes in each of the four hoppers and is available as a standalone manual printer or as a fully automated system.
