

Qiagen launches EZ2 Connect MDx for diagnostic use

Jan. 19, 2023—[Qiagen](#) has launched its EZ2 Connect MDx for use in diagnostic laboratories. The platform enables labs to purify DNA and RNA from up to 24 samples at the same time in as few as 30 minutes and uses magnetic-bead technology to extract nucleic acids from blood plasma, serum, stool, and other sample types. The benchtop instrument automatically pierces sealed cartridges, heats samples for incubation, and automates pipetting of beads, buffers, and enzymes. It can be used in research or IVD mode and remotely monitored and managed using the QIASphere app.
