

Qiagen, Seegene partnership, 9/15

Qiagen announced a collaboration with Seegene in which Seegene will develop a menu of multiplex assay panels for Qiagen's modular QIASymphony RGQ MDx automation platform.

The first project is to develop comprehensive panels to profile infectious diseases. Seegene's proprietary technologies for multiplexed real-time PCR analysis enable simultaneous amplification of up to 20 target genes per tube in a single reaction. Qiagen will validate the new tests to run on QIASymphony RGQ MDx and will market them worldwide as Qiagen-branded assays, beginning in Europe and Asia.
