

Quest unveils transplant diagnostic services

April 2023—Quest Diagnostics unveiled Quest Advanced Specialized Transplant Services, designed to expand access to laboratory tests for transplanting solid organ, human cells, and tissue. Quest says its new offering features a menu of more than 170 specialized transplant and infectious disease tests, longitudinal trends analysis of test results in the electronic medical record, and support services that include medical consultation. Patients can access Quest's network of 2,100 patient service centers and 5,000 mobile and at-home phlebotomists to support patient-compliant pre- and post-transplant testing. The services are available to recipients and living donors across the United States, excluding Alaska and Hawaii.
