

Randox teams up with Bosch, 5/18

May 2018—Randox Laboratories unveiled Vivalytic, a molecular diagnostics platform, with Bosch Healthcare Solutions at the 28th European Congress of Clinical Microbiology and Infectious Diseases, April 21–24, in Madrid. Vivalytic supports end-point PCR, quantitative real-time PCR, melting curve analysis, and microarray technology, enabling singleplex, low-plex, and high multiplex testing on the same device. Depending on the test application, results will be available in 30 minutes. The first tests available on the Vivalytic are Randox's panels for respiratory and sexually transmitted infections.
