

## Rapid strip-based hemoglobin test, 9/13

EKF Diagnostics offers its Stat-Site M Hgb strip-based test for quick and easy hemoglobin analysis for rapid anemia determination. Stat-Site M Hgb is a portable handheld analyzer.

The pocket-sized device delivers accurate hemoglobin analysis results within 30 seconds from 15 µL of fingerstick whole blood. This hemoglobin photometer is maintenance-free and includes intuitive, step-by-step on-screen instructions to minimize operator training.

Its durability, portability, and user-friendliness make the device especially suited to blood screening programs in developing world markets. It also has a niche in settings where operators are mobile. It uses one 3V Li type battery for every 1,000 tests and operates within a temperature range of 16°C to 35°C, making it ideal for field use.
