

Reference material, 11/16

November 2016—MilliporeSigma introduced its Certified Spiking Solution of intact, heavy labeled thyroglobulin in SigMatrix, a synthetic surrogate serum. The matrix-based reference material is suitable as an internal standard for the quantification of thyroglobulin levels by LC-MS/MS methods to ensure accurate, identifiable, and quantifiable clinical diagnostic testing. MilliporeSigma's solution-based product is the first endogenous protein biomarker of the Cerilliant portfolio.
