When to replace your LIS

Jan. 29, 2015—Laboratory informatics plays a vital role in helping labs expand their reach and become more involved in patient outcomes. The latest Orchard Software white paper reviews how to evaluate whether a laboratory information system can help carry out that task, and when it is time to look for something new. **Read it**.

According to Orchard, these are some warning signs of an outdated LIS: it is unreliable, difficult to support, lacks satisfactory customer service, lacks key functionality, cannot integrate with other systems, and no longer fits with a new workflow.
