

## Respiratory bacterial panel gets CE-IVD mark, 4/18

**April 2018**—ElitechGroup Molecular Diagnostics launched its Respiratory Bacterial Elite MGB Panel, a high-performance multiplex assay for the diagnosis of bacterial respiratory infections validated on the Elite InGenius sample-to-result system. The panel detects and differentiates in a single reaction *M. pneumoniae*, *C. pneumoniae*, and *L. pneumophila*. A clinical study demonstrated a performance of 100 percent diagnostic sensitivity and 100 percent diagnostic specificity for all targets.

The CE-IVD Elite InGenius respiratory menu will be further broadened with a real-time PCR assay for the detection of *Mycobacterium tuberculosis* and associated multidrug resistant forms to rifampicin and of isoniazid.
