

## Roche adds high-throughput configurations to Cobas Pro

July 2021—Roche launched eight configurations for its Cobas Pro integrated solutions, in countries accepting the CE mark. As a result, the analyzer can deliver up to 4,400 tests per hour, doubling its previous testing capacity. It is now possible to add two analytical units of Cobas c 503 and/or Cobas e 801, consolidating up to four analytical units on one platform.

Cobas Pro integrated solutions is a scalable and modular system designed to achieve mid- to high-volume clinical chemistry and immunochemistry testing needs. It aims to increase efficiency with fast analytical units, intelligent sample routing, and short assay incubation times, with 93 percent of Roche immunoassays having reaction times of 18 minutes or less.
