

Roche, Bio-Techne expand partnership

July 2019—Roche is expanding its partnership with Bio-Techne by offering chromogenic detection kits for automated in situ hybridization tissue analysis. The Roche kits include the Discovery mRNA Purple HRP and Discovery mRNA Teal HRP detection kits, which feature translucent dyes for co-localization studies for mRNA ISH and can perform immunohistochemistry and ISH for protein-RNA co-detection on the same slide. The kits are for research use only on the Discovery Ultra platform with the ACD RNAscope reagent kits from Bio-Techne.
