

Roche debuts Navify solutions at HIMSS24

March 15, 2024—[Roche](#) debuted its Navify Analytics for POC and Navify Monitoring solutions at the Healthcare Information and Management Systems Society global health conference in Orlando, March 11-15. Navify Analytics for POC provides actionable insights to point-of-care coordinators to better manage devices, test results, and staff training. Navify Monitoring provides real-time reporting of key performance indicators, events, and alerts in the laboratory setting so managers can quickly understand and respond to issues.

“Digital advances, such as AI, are transforming health care, and we have exciting new opportunities to increase the speed of diagnosis and improve outcomes for patients,” Moritz Hartmann, global head of Roche information solutions, said in a press statement. “Roche’s Navify Analytics and Navify Monitoring will make a tangible difference to lab managers and point-of-care coordinators by reducing costs, increasing speed, and improving productivity, especially in areas like test turnaround times.”

The company’s suite of Navify operational excellence solutions for the molecular lab, core lab, and pathology lab were also showcased at the conference.
