

## Roche launches Discovery Green HRP kit

June 2021—Roche launched its Discovery Green horseradish peroxidase (HRP) kit, to identify and profile biomarkers and cell populations in tissue-based research.

The kit can be used in combination with other detection kits, expanding the multiplexing capability of immunohistochemistry and in situ hybridization by providing a distinct color that contrasts with other chromogens. Discovery Green HRP complements chromogens including the company's Discovery yellow, purple, red, and teal for multiplexing up to seven biomarkers simultaneously.

The research use only kit is supplied in ready-to-use dispensers and provides a stable staining signal during alcohol dehydration. It can be fully automated on the Discovery Ultra system.
