

Sarstedt launches NFT urine collection system

May 2023—Sarstedt's new Needle-Free Transfer Urine Collection System is a closed urine collection system for needle-free transfer of urine from the needle-free cup or urine collection container to a Urine Monovette. The cup and collection container feature an integrated transfer unit with a pierceable membrane. After collecting a sample with the Urine Monovette, the membrane reseals immediately, ensuring hygienic and repeatable sample collection with no risk of accidental needle sticks. A 100-mL urine cup and 3-L urine container are available.
