

## Seegene unveils molecular testing system

Sept. 29, 2021—[Seegene](#) unveiled its first fully automated PCR testing system, Starlet-AIOS, at the 2021 AACC annual meeting, Sept. 26-30, in Atlanta.

The system is composed of independent and detachable modules along with the company's proprietary SW architecture. It is designed with an extraction/liquid handler and PCR instrument that are integrated with an in-house-developed robotic arm module. Seegene says laboratories can purchase the full package AIOS system or integrate their existing instruments on site if they already have Seegene's liquid handler and real-time PCR instrument.
