

SeraCare Life Sciences goes live with SAP

SeraCare Life Sciences completed its implementation of SAP enterprise resource planning (ERP) software. The SAP system integrates the company's inventory planning and control, purchasing, production management, quality management, and financial reporting systems into a single software solution.

"Our deployment of SAP delivers greater insight into day-to-day processes and facilitates data-driven forecasting and planning," Charles Mamrak, CEO of SeraCare, said in a statement. "SAP will enable us to better meet customer needs with faster, more accurate information about product availability, product specifications, order tracking, and more."
