

SeraCare releases FFPE solid tumor CNV reference material

April 14, 2023—[LGC SeraCare](#) has developed a comprehensive solid tumor copy number variation reference material in a formalin-fixed, paraffin-embedded format. The Seraseq FFPE Solid Tumor CNV RM includes 12 clinically relevant CNVs associated with solid tumors. Amplifications of these target genes are quantitated by digital PCR, blended in a well-characterized genomic background, and validated with next-generation sequencing. One 10-µm FFPE curl is provided per vial, and the product is designed to give a minimum yield of 100 ng per curl.
