

Serological pipettes, 5/14

May 2014—Eppendorf introduced a series of Eppendorf Serological Pipets for cell culture applications. The pipettes are designed to work with the Eppendorf Easypet 3 pipette controller and are made from ultraclear virgin polystyrene, complying with USP class VI plastic tests. Each pipette has a sterility assurance level of 10^{-6} and sharp graduation for easy readout. The protective outer packaging can be used as a dispenser for the individually wrapped pipettes.
