

## Siemens launches two Sysmex hemostasis systems

Aug. 16, 2021—[Siemens Healthineers](#) has launched Sysmex's CN-3000 and CN-6000 hemostasis systems for mid- and high-volume coagulation testing. A broad menu of Siemens' routine and specialty coagulation assays that help identify blood coagulation disorders such as abnormal blood clotting or bleeding, including Siemens' new Innovance Anti-Xa assay for heparin and direct oral anticoagulant testing, can be performed on the Sysmex CN-3000 and CN-6000 systems.

"Siemens Healthineers and Sysmex's 25-year partnership in hemostasis enables us to deliver both quality and comprehensive hemostasis testing solutions to laboratories of all sizes across the world," Deepak Nath, PhD, president of laboratory diagnostics for Siemens Healthineers, said in a press release.

The systems are designed to integrate with Siemens Atellica data manager and Aptio automation and can connect to the Atellica process manager. These products are not for sale in the United States.
