

Singulex *C. difficile* toxin A/B assay

November 2018—Singulex introduced its Singulex Clarity *C. diff* toxin A/B assay. The assay is a rapid, high-sensitivity, high-precision, one-step solution to *C. difficile* toxin testing that matches the sensitivity and specificity of cell cytotoxicity neutralization assay, the company reports, “giving it the potential to reduce the false-positives of PCR and the false-negatives of current, less sensitive toxin immunoassays.”

Powered by single molecule counting technology, the Singulex Clarity *C. diff* toxin A/B assay detects *C. difficile* toxins at an analytical sensitivity that detects 100 times lower concentrations than current immunoassays, delivering results in less than 35 minutes.
