

Slide printer ribbons, 8/13:86

Primera Technology now offers its chemical- , temperature- , and abrasion-resistant TuffCoat 2 (TC2) high-performance ink ribbons for its Signature Slide Printer. The new ribbon formulations were developed specifically to provide superior performance in pathology, histology, cytology, and other types of laboratory applications.

The TC2 ribbons are available in black monochrome and CMYK and are highly heat and chemical resistant, even if touched while wet with chemicals such as xylene or acetone. The ribbons dry instantly and are permanent, with no need for heat, fans, or infrared light treatment. They work on a variety of commonly used slides and brands, and low heat and print head pressure result in reliability and long intervals between print head replacement.
