

SPE product for urine drug testing

June 2018—Phenomenex introduced Strata-X-Drug B Plus, a solid-phase extraction sample preparation product for urine drug testing in clinical and forensic toxicology laboratories. The Drug B Plus option joins the original Strata-X-Drug B, which is designated for matrices such as plasma, whole blood, and serum. It features the company's Solvent Shielding Technology, which enables an enzyme hydrolysis to be carried out directly in the microplate well. The hydrolysis solution can be held for six hours or more, which aims to provide flexibility in protocol planning. Strata-X-Drug B Plus is available in a 96-well plate format and enables the extraction of more than 22 drugs of abuse.
