

Sperm quality analyzer, 9/15

At the AACC show 2015

Medical Electronic Systems released its new automated sperm quality analyzer, the SQA-Vision. Developed based on 10 years of market feedback, the SQA-Vision is positioned to augment Medical Electronic's line of SQA-V and QwikCheck semen analyzers with a top-of-the-line solution.

The SQA-Vision includes a high-resolution visual interface, barcode scanning technology, built-in laboratory information system capability, and click-to-mark counters for assessing sperm vitality and conducting full differential morphology. Medical Electronic developed the SQA-Vision as an intuitive tool for fertility screening, post-vasectomy follow-up, sperm banking, research, or detailed in vitro fertilization assessment. In addition to its predecessor's testing modes (fresh, washed, frozen, and post-vasectomy), the SQA-Vision now includes density gradient, swim up, longevity, and vitality testing options.
