

## Staining platform, 4/13:84

Dako's Omnis solution, a new addition to the company's immunohistochemistry portfolio, consists of hardware, software, and reagents. It automates IHC and ISH processes, allowing entire patient cases to be processed simultaneously.

The solution offers continuous loading, batch loading, and overnight run options. Its state-of-the-art software allows slide processing and instrument maintenance to be traced to individual operators, greatly increasing quality control.
