

Streck launches Protein Plus BCT whole blood collection tube

April 8, 2024—[Streck](#) announced the launch of its Protein Plus BCT direct draw whole blood collection tube to provide sample integrity during storage, shipping, and handling of blood samples. The tube contains a preservative reagent that minimizes ex vivo hemolysis and platelet activation in collected samples, limits the interference of proteins released from blood cells, and maintains draw-time concentrations of plasma proteins during whole blood storage at ambient temperature. It is compatible with mass spectrometry and immunoassay-based proteomic analysis and for research use only.
